NATIONAL BULLETIN NO. 200-2-6

SUBJECT: ECN - AGRICULTURAL COMMODITY PRICES FOR FISCAL YEAR 1992 WATER RESOURCE AND WATERSHED PROTECTION PLANS

Purpose. This bulletin transmits the Economic Research Service's (ERS) current normalized prices for agricultural commodities; the new average commodity prices to be used in land treatment projects; and the updated user-day recreational values. The information is to be used during fiscal year 1992 for plan formulation and evaluation in water and related land resources implementation studies. This bulletin should be distributed to all persons involved in project planning.

Expiration Date. September 30, 1992.

Background. The Economic and Environmental Principles and Guidelines for Water and Related Land Resources Implementation Studies (P&G) specify the use of current normalized crop prices issued by the Department of Agriculture to evaluate National Economic Development agricultural benefits in water resource projects. Nonwater resource projects (i.e., projects with land treatment measures only) are not restricted by P&G; therefore, five-year average prices will be used for formulation and evaluation. Average commodity prices can be computed by the SCS state economist using a five-year average of past marketing year average prices published by the National Agricultural Statistics Service (NASS). Enclosed are the average commodity prices for the major commodities. The P&G also provides for annual updating of recreational dollar values according to changes in the consumer price index.

Current Normalized Prices. Enclosed are the current normalized prices (CNP) for agricultural commodities for fiscal year 1991 furnished by ERS. The computational methods used are discussed in the enclosure. The 1991 CNP will continue to be used in fiscal year 1992 until further notice. The fiscal year 1992 current normalized price for pasture will not exceed $10.00 per animal-unit-month, unless documented by actual data on pasture leases.

DIST: L, T, S

Average Commodity Price. The voluntary adoption of soil and water conservation practices in watershed protection projects requires that the commodity prices used in plan formulation reflect the economic realities faced by farmers and ranchers. To smooth the wide year-to-year fluctuation that characterized agricultural commodity prices, a five-year average of NASS prices will be used. See the enclosed example and the tables of average commodity prices for a detailed explanation. If questions arise, contact your National Technical Center Economics and Social Sciences staff.

Adjustment of Recreational Values. Recreation user-day values for fiscal year 1992 are to be indexed upward from those shown on page 84 of the P&G by an index factor of 1.42. This is the relationship that exists between the 1982 and October 1991 Consumer Price Index. A revised table of user-day values is enclosed.

INFORMATIONAL MEMORANDUM FOR JAMES R. MOSELEY, ASSISTANT SECRETARY FOR NATURAL RESOURCES AND ENVIRONMENT

THROUGH: Bruce Gardner
Assistant Secretary
for Economics

FROM: John E. Lee, Jr.
Administrator

SUBJECT: 1991 Normalized Prices

We transmit herewith the "current normalized prices with support programs" for use by Federal agencies in the evaluation of water related development projects in 1991. Consistent with established practice, these prices are transmitted to you for distribution to Federal water resource agencies. The methodology used to calculate these prices is explained in the attached text and is based on a comprehensive supply-demand analysis. This approach to calculating "current normalized prices with support programs" was discussed in my November 12, 1985, memorandum to Assistant Secretary Peter C. Myers.

The current approach utilizes structural information obtained from commodity specialists in the Economic Research Service and from simulation models of the agricultural sector. This approach is designed to minimize short run distortions in prices caused by abnormal weather and temporary changes in foreign demand for agricultural products while deriving consistent relative prices for commodities and cost indices for production inputs.

CURRENT NORMALIZED PRICES

The orderly development and use of water and related land resources require that a consistent set of economic standards and criteria be used for the evaluation of agricultural benefits and costs. Agricultural price standards provide the basis for valuing the agricultural effects of alternative development and management plans for water and related land resources.

AUTHORITY

The authority for these standards is set forth in the Water Resources Planning Act (P.L. 89-90) and in the Economic and Environmental Principles and Guidelines for Water and Related Land Resources Implementation Studies. These Principles and Guidelines state in part:

"Section 1.4.10 Prices

a. The prices of goods and services used for evaluation should reflect the real exchange values expected to prevail over the period of analysis. For this purpose, relative price relationships and the general level of prices for outputs and inputs prevailing during, or immediately preceding, the period of planning generally represent the real price relationships expected over the life of the plan, unless specific considerations indicate real exchange values are expected to change.

b. The general level of prices for outputs and inputs prevailing during or immediately preceding the period of planning is to be used for the entire period of analysis. In the case of agricultural planning, normalized prices prepared by the Department of Agriculture should be used."

CONCEPTUAL BASIS FOR NORMALIZED AGRICULTURAL PRICES AND COSTS

Current normalized prices are to be used in all economic evaluations covered by the Principles and Guidelines, such as:

1. Evaluation of beneficial or adverse effects of alternative projects and programs under consideration.

2. Appraisals of economic impacts where such impacts are expressed in terms of value of production or income.

The project evaluation process should yield valid estimates of the aggregate benefits and costs during the life of the projects and programs under consideration. These estimates need to be based on relative price relationships that are representative of the period of analysis and that are not distorted by short-term abnormalities. Market prices and costs are generally influenced by highly variable factors such as weather and sudden demand changes. Thus, a procedure is needed to correct for the effects of these factors.

Normalized Prices: 1991

Commodity	Units	Market Clearing Price Estimates With Support Programs
Program Commodities		
Wheat, all	Bu.	2.75
Rye	Bu.	2.00
Rice	Cwt.	7.00
Corn	Bu.	2.25
Oats	Bu.	1.35
Barley	Bu.	2.05
Sorghum grain	Cwt.	3.75
Sugarbeets	Ton	37.50
Sugarcane for sugar	Ton	28.50
Cotton, lint (upland)	Lb.	0.60
Tobacco	Lb.	1.70
Soybeans for beans	Lb.	5.65
Peanuts harvested for nuts	Lb.	0.30
Milk	Cwt.	11.50
Wool	Lb.	0.75
Non-Program Commodities		
Apples, fresh market	Lb.	0.17
Oranges, all	Box	6.20
Grapefruit, all	Box	5.00
Sweetpotatoes	Cwt.	13.00
Steers and Heifers	Cwt.	71.00
Feeder Steers - 8 markets	Cwt.	75.00
Cows for slaughter	Cwt.	49.00
Calves	Cwt.	77.00
Sheep	Cwt.	18.50
Lambs	Cwt.	59.80
Hogs	Cwt.	51.00
Broilers, commercial	Lb.	0.36
Turkeys	Lb.	0.50
Eggs	Doz.	0.60
Dry beans	Cwt.	20.00
Cottonseed	Ton	85.00
Flaxseed	Bu.	5.50
Hay, all (baled)	Ton	80.00
Potatoes	Cwt.	5.20

Average Commodity Prices

Average Commodity Prices are to be used in non-water resource projects such as watershed protection plans, as defined by the National Watershed Manual. These plans may serve several purposes, but they include only land treatment measures. Average Commodity Prices are defined as the five year average of prices published by the National Agricultural Statistics Service. These are average market year prices that do not include deficiency payments. Enclosed is a listing of the 1986 through 1991 state prices for each major commodity. Also enclosed is a list of state National Agricultural Statistical Service contacts, should a state need additional information.

The following is an example of the process to be used to compute Average Commodity Prices.

$[(P_{1987})+(P_{1988})+(P_{1989})+(P_{1990})+(P_{1991})]/5$ = FY-92 Ave Commodity Price

The FY-92 United States Average Commodity Price for corn would be:

[($1.94)+($2.54)+($2.36)+($2.28)+($2.40)]/5 = $2.30/bu

In late January each year, the National Agricultural Statistics Service publishes a summary of the prior year's commodity prices.
